Ocean Optics STS Micro USB NIR Spectrometer - 634nm to 1125nm - NO SLIT

US $249.99

Brand
Ocean Optics
Type
Optical Spectrometer
Model
STS-NIR
MPN
STS-NIR
Intended Use/Discipline
Biological Laboratory, Medical Laboratory, Microbiological Laboratory

Up for sale is my Ocean Optics STS NIR Spectrometer that reads from 634nm to 1125nm. When I got the spectrometer I noticed that there was something loose inside. When I opened it up, I saw that the slit had fallen out. You can see this little piece in my second and third picture. According to Ocean Optics, this happens when someone uses the wrong SMA-905 cable that has a longer ferrule and when you insert it into the spectrometer, it pushes the slit off. The 100um slit is held on by glue so the new owner will have to glue it back into position but it is VERY critical that it's position is perfect so that might be a little tricky unless you have some type of jig to hold everything in place while gluing it back on. As you can see by my last picture, the spectrometer works great but just has horrible resolution without it's slit. I'm selling it AS-IS. Thank you.

We pride ourselves on having the best prices on eBay. If you find a fixed price item for sale on eBay or the internet that is identical to one in our store and is being sold for less, let us know and give us a chance to meet or beat our competitor's price.

Feedback:

We want our customers to be completely satisfied with their purchase. If anything about your transaction is not to your satisfaction, please contact us BEFORE leaving feedback, inform us of the issue, and we will do our best to resolve the problem to your satisfaction in order to receive positive feedback. We think good communication ensures a successful transaction and efficient problem resolution in advance of posting permanent feedback and gives both parties the best chance for a positive trading experience on eBay.

International:

We will ship worldwide. Please remember your item must go through customs which can delay receiving your item in a timely manner. Custom holds and delays vary from country-to-country and are beyond the control of the Seller. We will not mark your item as a gift or pay any customs fees. Import duties, taxes and charges are not included in the item price or shipping cost. These charges are the Buyer's responsibility. Please check with your country's customs office to determine what the additional costs will be prior to purchase.

Shipping:

In case you need the item urgently, please contact us and we'll update shipping fee offer.

Please don't hesitate to contact us for any questions or concernes.

Tested, begins sensitivity range >575nm as seen in the photos. Additionally, this device has been formatted updated. Does not include control PC or software shown in the test photos. Those were for demonstrating the working condition of this spectrometer only (for reference, that signal shown is a mercury argon cal light). This spectrometer can work with the latest Ocean Insight software.
