SciAps Z-200 Handheld LIBS Analyzer

Alloy & Element Identification with Check Standard Kit

SKU: CP100279 Model: Z-200 Product Condition: Certified Pre-owned

$12,999.95

Certified pre-owned SciAps Z-200 handheld LIBS analyzer with Alloy and Element Pro Apps. Alloy App enables fast grade verification, while Element Pro delivers broad qualitative scans across metals and light elements. Includes full kit.

Product Description

Handheld LIBS Performance with SciAps Z-200

The SciAps Z-200 handheld LIBS analyzer delivers rapid alloy identification and broad qualitative scanning in a compact, field-ready platform. With a 190–625 nm spectral range, on-board argon purge for enhanced sensitivity, and app-driven workflows, the Z-200 is designed for efficient, accurate materials analysis. Certified pre-owned and function-tested, this kit includes check standards, charger, and safety gear for immediate deployment.

Why It Helps

- Fast alloy verification in the field using the Alloy App.
- Broad qualitative scans for extended element coverage with the Element Pro App.
- Export Manager and Results Apps simplify reporting and data handling.
- Argon purge system increases sensitivity up to 10× compared to air-burn operation.

Key Highlights

- Spectral range: 190–625 nm, 50 Hz, 5–6 mJ/pulse laser.
- Installed Apps: Alloy, Element Pro, Export Manager, Results.
- On-board argon cartridge supports ~600 tests per canister.
- 5” touchscreen with Android OS and wireless connectivity.
- Lightweight 4 lb design with rugged transport case.

App Capabilities

App	Capabilities
Alloy	Quantitative alloy identification with a built-in grade library. Verifies steels, stainless steels, nickel alloys, aluminum, titanium, and specialty metals.
Element Pro	Qualitative scanning app for extended elemental coverage. Detects metals and light elements measurable within the Z-200’s 190–625 nm range, including Li, Be, B, Na, Mg, Al, Si, Ca, Ti, V, Cr, Mn, Fe, Co, Ni, Cu, Zn, Mo, W, Pb, and more.

Applications

- Quality control and alloy verification in manufacturing.

- Scrap and recycling operations for rapid metal sorting.
- Mining and geochemistry for elemental field analysis.
- Environmental checks using customizable calibration workflows.
